

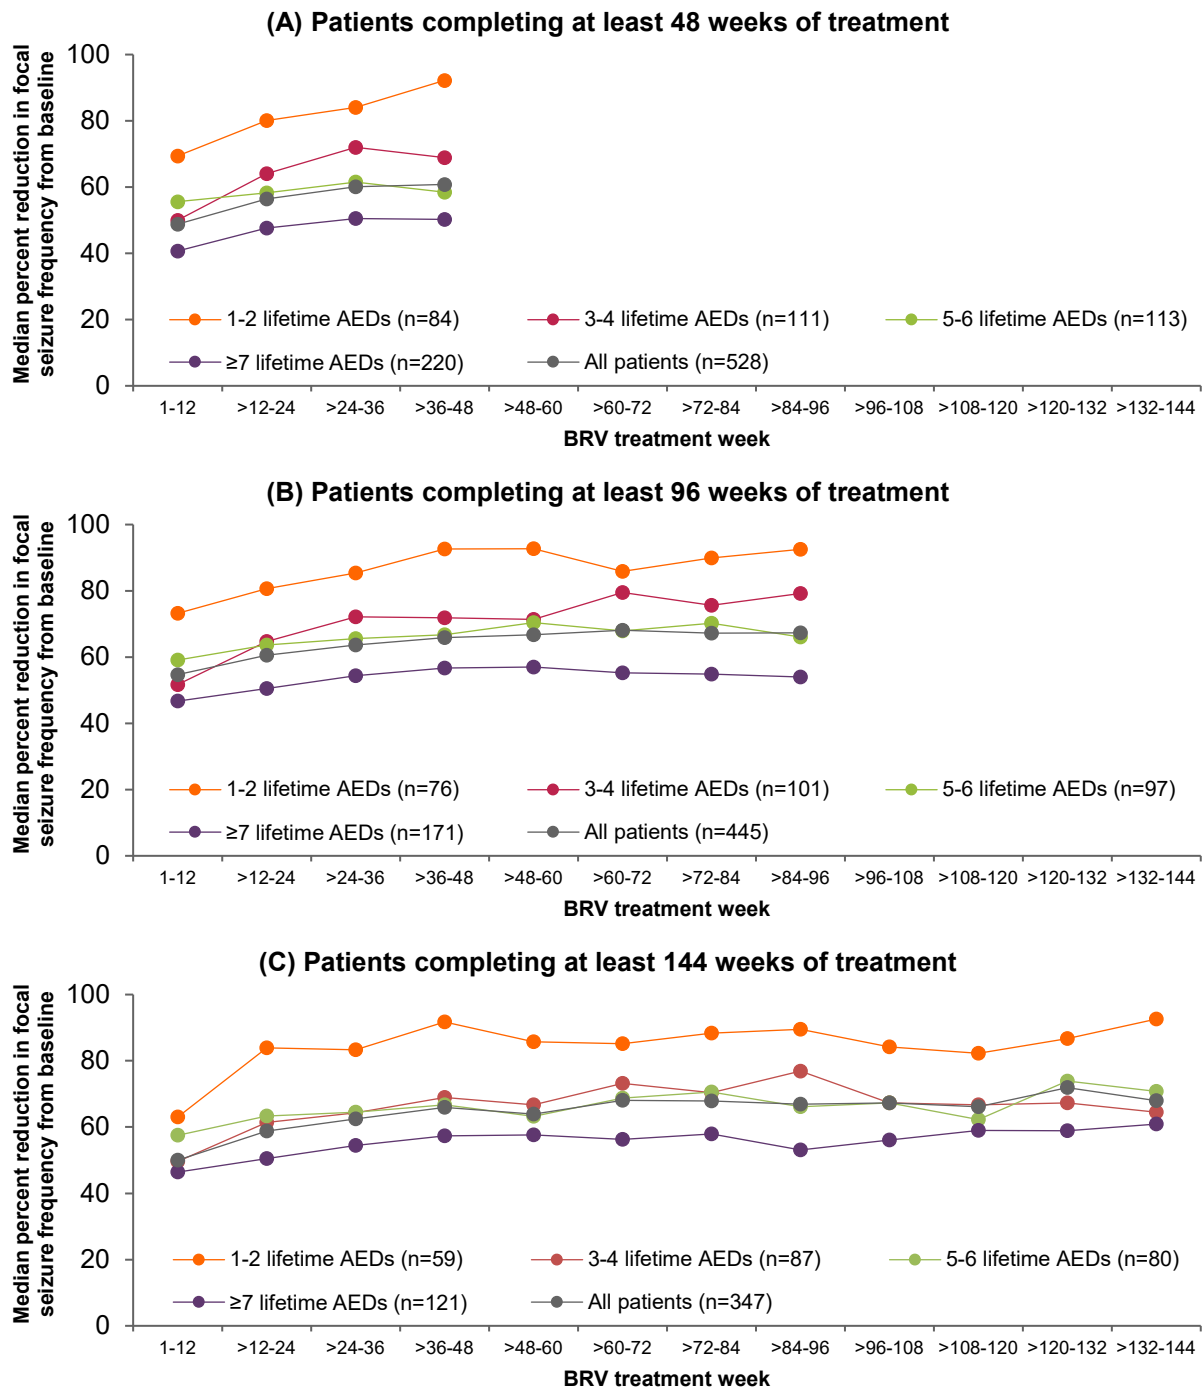

Figure 2. Median percent reduction from baseline in focal seizure frequency/28 days over time in patients completing specified durations of treatment (efficacy population^a).

Lifetime AEDs included AEDs stopped before BRV initiation and AEDs ongoing at BRV initiation.

^aThe efficacy population included all patients who received ≥1 dose of BRV and had ≥1 post-baseline seizure diary entry during BRV treatment in the double-blind or long-term follow up trial.

AED, antiepileptic drug; BRV, brivaracetam.
