

Figure 1: Scalp EEG correlates of hippocampal spikes with variable extents of neocortical propagation. RHD: right hippocampal depth electrode; RATS: right anterior temporal 1x6 subdural strip electrode; RITS: right inferior temporal 1x6 subdural strip electrode; RPTS; right posterior temporal 1x6 subdural strip electrode. Low frequency pass filter: 1Hz; High frequency pass filter 50Hz. Sensitivity: intracranial 100 μ V/mm, scalp 10 μ V/mm.
