

Outcomes by Resection of Very High Outflow Contacts

Figure 2. Subject-level outcomes based on the number of very high outflow contacts included in the resection versus those not included in the resection. The blue (sz-free) and red (sz-persist) bars indicate the difference in the number of resected and unresected contacts. The gray bars indicate the total number of resected (positive) and unresected (negative) contacts at z-score threshold ≥ 2 for each subject.
