

Table 1. Approach to EEG surveillance in TSC children.

Type of the survey question is indicated in the square brackets: single-choice or open (free text)

Type of performed EEG (n=61) [single choice]	standard EEG (no videoEEG)	video EEG	other				
	17 / 61 27.9%	42 / 61 68.8%	2 / 61 3.3%				
Do you perform EEG before epilepsy onset in TSC infants (at least one EEG)? (n=60) [single choice]	Yes		No				
	57 / 60 95.1%		3 / 60 4.9%				
How often do you perform EEG before the onset of seizures? (n=57) [free text]	Once	Every 1 - 3 months	Every 3 - 6 months	not specified			
	11 / 57 19.3%	35 / 57 61.4%	7 / 57 12.3%	4 / 57 7.0%			
If you perform EEG before clinical seizures, until what age do you conduct EEG in TSC children? (n=57) [free text]	EEG is performed only once and repeated if seizure suspicion	until 12 months	12 - 23 months	24 months	25 - 36 months	at least 36 months	not specified
	11 / 57 19.3%	12 / 57 21.1%	4 / 57 7.0%	19 / 57 33.3%	4 / 57 7.0%	3 / 57 5.3%	4 / 57 7.0%
