

Figure 2: BRD4 and HDAC1 are overexpressed in ERMS. A. Representative immunoblots of BRD4 and HDAC1 protein levels as expressed in untreated RD and RMS-YM cells. AB1190 myoblasts were used as control cell line and α -tubulin was used as loading control. B. n=3 biological repeats were performed for BRD4 expression with \pm SD shown. Student t-test was performed for statistical results. Abbreviations: YM, RMS-YM.
