

Table 1: Themes and illustrative quotes from medical student answers to free-response questions on evaluating the breastfeeding curriculum

<u>Theme</u>	<u>Illustrative Quotes</u>
Supporting breastfeeding patients and families in the clinical environment	"I have so much more information to work with. I haven't talked much about breastfeeding with moms in my clinic, so I am excited to start!!"
	"I will try to demystify the stigma"... "there is no right time to stop"
	"I will be using the evidence based recommendation of 2 years + for breastfeeding. I will also talk to patients about the true contraindications for breastfeeding and work to combat misconceptions about breastfeeding contraindications."
	"Counsel patients differently and more thoroughly about the benefits of milk production and how it affects the baby positively"
	"I will be able to council patients much easier about how to manage breastfeeding in the workplace and getting pumps"
	"encouraging parents to breastfeed their children for as long as possible, including pumping if they need to go back to work"
Appreciation of the longitudinal patient case format	"I appreciated how the case was presented. Moving through the different stages of breastfeeding at different times in a child's first few years was very helpful to frame the discussion."
	"the format of the session with the patient presentation as they age was very useful"
