

**Table 2.** Additional delivery characteristics of infants with proven and suspected EOS

	Proven EOS (N=12)	Suspect EOS (N=90)	P-value*
Fetal indication for birth	12/12 (100)	69/87 (79)	0.12
Maternal indication For birth	0/12 (0)	18/87 (21)	
Reason for preterm birth			<0.01
Pre-labor ROM +Chorioamnionitis	3/12 (25)	5/87 (5)	
Fetal Distress	0/12 (0)	7/87 (8)	
Preterm Labor	9/12 (75)	57/87 (66)	
Preeclampsia	0/12 (0)	18/87 (21)	
Induction of labor	3 (25)	10 (11)	0.06
Maternal urinary tract infection	2 (17)	13 (14)	1.00
Antibiotics prior to delivery	9 (75)	69 (77)	1.00
Total antibiotic doses per patient prior to delivery	2 (1, 3)	2 (1, 5)	0.54
Total days of treatment after birth	8 (3, 14)	5 (5, 7)	0.02
Placental Acute Chorioamnionitis	10/10 (100)	54/85 (64)	0.03

\*n (%) compared with Chi-square test and median (25<sup>th</sup>, 75<sup>th</sup>) compared with Rank sum test.

Abbreviations: ROM, rupture of membranes.
