

Table 1. Institutional Practices Related to Non-Accidental Trauma Evaluation

Question	Yes	No	n	% Yes
Clinical Protocols and Prompts				
Does the institution have a guideline for the work-up of physical child abuse?	12	6	18	66.7%
Does the institution have an orderset for the work-up of physical child abuse?	14	4	18	77.8%
Does the institution have prompts to screen for sentinel injuries?	9	9	18	50.0%
Intra-Abdominal Injury Labs				
Does the institution obtain screening labs for abdominal injuries in asymptomatic patients under a certain age?	14	4	18	77.8%
Does the institution use 80 as the cutoff for AST to indicate the need for abdominal imaging in asymptomatic patients?	11	5	16	68.8%
Does the institution use 80 as the cutoff for ALT to indicate the need for abdominal imaging in asymptomatic patients?	10	5	15	66.7%
Head Imaging				
Does the institution have age cutoffs to obtain head imaging in asymptomatic patients?	11	7	18	61.1%
Does your institution utilize a non-contrast head CT as the initial head imaging in asymptomatic patients?	14	4	18	77.8%
Skeletal Survey				
Does the institution have a list of indications for obtaining a skeletal survey?	12	6	18	66.7%
Does the institution obtain skeletal surveys for older children with developmental delay or multisystem trauma?	11	6	17	64.7%
Does the institution have skeletal surveys available at all times?	16	2	18	88.9%
Do children receive follow-up skeletal surveys?	13	5	18	72.2%
Resources and Access				
Does the institution have all components of the non-accidental trauma work-up available during nights and weekends?	12	6	18	66.7%
Does the institution have a child abuse pediatrics team?	18	0	18	100.0%
Does the institution have a quality assurance process for non-accidental trauma cases?	12	4	18	66.7%
