

Table 4. Changes in Clinicians' Perceived Influence on Parental HPV Vaccination Decisions

Survey Question	Baseline %(n) N=91	Final %(n) N=91	p-value
1. I am usually able to convince hesitant parents to vaccinate their child for HPV.			0.20
Strongly Agree	11.1% (10)	19.8% (18)	
Somewhat Agree	60.0% (54)	59.3% (54)	
Somewhat Disagree	24.4% (22)	17.6% (16)	
Strongly Disagree	4.4% (4)	3.3% (3)	
2. When parents wish to delay or refuse HPV vaccination for their child there is not much I can say to change their minds.			0.82
Strongly Agree	11.1% (10)	8.8% (8)	
Somewhat Agree	41.1% (37)	39.6% (36)	
Somewhat Disagree	40.0% (36)	40.7% (37)	
Strongly Disagree	7.8% (7)	11.0% (10)	
3. I am influential in parents' decisions about whether or not to get HPV vaccine for their child.			<0.01
Strongly Agree	22.2% (20)	44.0% (40)	
Somewhat Agree	63.3% (57)	48.4% (44)	
Somewhat Disagree/ Strongly Disagree	14.4% (13)	7.7% (7)
