

Table 1: Mixed-effects model evaluating associations between gestational and postnatal age with urinary NGAL concentrations.

Model	Predictor	Estimate (β)	Percent change in uNGAL (95% CI)	P value	AIC
Gestational age + postnatal week	Gestational age (weeks)	-0.223	-19.9% (-30 to -8.2)	<0.001	729.2
	Postnatal week	-0.088	-8.4% (-11.2 to -5.5)	<0.001	
Postmenstrual age	Postmenstrual age (weeks)	-0.093	-8.9% (-11.7 to -6)	<0.001	732
