

Table 1. Clinical status and main findings of lung MRI at 36 weeks PMA.

Clinical status (n=88)	
PMA (weeks)	3.6 [35.1 – 36.5]
DOL at MRI	53.5 [45 – 65.7]
Weight (grams)	2164 [2000 – 386]
Weight z-score	-1.09 [-1.82 – -0.50]
Oxygen / respiratory support at lung MRI	34 (38.6)
BPD severity according to lung MRI (n=83)	
No	51 (61.4)
Mild	25 (30.1)
Moderate	7 (8.4)
Severe	0 (0)
Score Ochiai (modified for lung MRI)	2 [1 – 7.3]

Values are expressed in numbers (%) and median [25th – 75th centile].

Abbreviations. BPD: bronchopulmonary dysplasia; DOL: day of life; MRI: magnetic resonance imaging; PMA: postmenstrual age.
