

Table 1. Summarized farm data for dairy (D), beef (B), or dairy and beef (DB) production.

Farm type	Annual milking cows/herd	Energy corrected milk/year (kg)	Slaughtered cattle/year in planned beef production	Age at slaughter (m)	Beef semen usage (%)	Sexed semen usage ¹ (%)
D (n=6)	72-300	11,600-13,500	-	-	10-75	20-100
DB ² (n=9)	72-330	10,000-14,600	20-100	18-30	5-60	10-100
B (n=6)	-	-	100-1200	8-10 or 13-23	-	-

¹ Total usage of sexed semen, all breeds included. Five farms, all DB-farms, did not use sexed beef semen; in contrast, sexed semen was used by all farms for dairy breeds.

² All DB-farms had dairy production as their primary interest and reared some animals in planned beef production.
