

Metric	Value	Measurement
Total number of responses	185	
Total number of completed responses	150	
Are familiar with the concept of ACEs	4.33 ± 0.88	(mean ± SD)*
Are familiar with the concept of TIC	4.15 ± 0.87	(mean ± SD)*
Are comfortable responding to trauma disclosure	3.73 ± 0.93	(mean ± SD)*
Rarely screen for ACEs in practice	33.3%	% of respondents
Often screen for Trauma in practice	44.0%	% of respondents
Top barrier identified as time constraints	64.7%	% of respondents
Top facilitator identified as structured education	60.7%	% of respondents

**Table 1. Key Metrics from Preliminary Analysis of Pediatric Clinician Perspectives on ACEs, Trauma and TIC.** This table summarizes descriptive statistics from a survey assessing familiarity, comfort, and screening practices related to Adverse Childhood Experiences (ACEs), trauma screening, and Trauma-Informed Care (TIC) among pediatric clinical staff. \*Awareness and comfort scores were measured on a 5-point Likert scale (1 = *strongly disagree*, 5 = *strongly agree*). Percentages represent the proportion of respondents endorsing specific practices or identifying barriers and facilitators.
